

# WriteOnGrid [en]

To write on lines  
of a grid.

Version 0.1.3 - 18/03/2023

Cédric Pierquet  
c pierquet - at - outlook . fr  
<https://github.com/cpierquet/WriteOnGrid>

- Some commands to create a grid (5x5 or Seyes or Ruled) and to write "on" the lines.
- Possibility to personnalize size, margins, ...

my text on line 1...

my centered text on line 2...

my right-align text on ligne 3...

my 2-squares shifted text on line 4...

my text, sans serif, on line 6...

my -1-square shifted text on line 7...

my text on line 1...

my text on line 2...

$1 + \frac{1}{2} = \frac{3}{2}$  et  $(1 + x)^2 = 1 + 2x + x^2$  on line 3...

my text on line 4...

*Thanks to Patrick Bideault for ideas and help !*

# Usage

## 1 The package

### 1.1 Loading of the package, used packages

The package WriteOnGrid loads within the preamble :

```
\usepackage{WriteOnGrid}
```

Code  $\LaTeX$

It's mostly compatible with latex, pdflatex, lualatex or xelatex compilation !

It loads the following packages and libraries :

- xcolor with options **<table>**,**<svgnames>** ;
- tikz with the librairies **<calc>** and **<positioning>** ;
- xstring, xparse and simplekv.

### 1.2 The package itself

The idea is to, thanks to TikZ, propose commands and environment to work with a grid, and to write on the lines.

```
%environment, with keys to prepare the grid  
%commands to write or pass a line  
  
\begin{EnvGrid}[keys]<color>  
  \WriteLine[keys]<alignment>{text}  
  \PassLine  
\end{EnvGrid}
```

Code  $\LaTeX$

### 1.3 Overall functioning

The grid is given by the number of squares ( $\text{nbCol} \times \text{nbRow}$ ), and after we can adjust with *overtakings* to enlarge the grid onto the margins of the paper (left or right). We can also *adjust* the global margin, to begin the lines differently.

For example, a  $5 \times 5$  grid :

- with a size  $24 \times 5$  squares ;
- with an overtaking by **2 squares at the left** and **3 squares at the right** ;
- with a global margin of **1 square** ;
- with a *border* to show the *basis* grid.

The tikzpicture is *bounded* by the *border*, in order to specify overtakings or alignment.

Le left-border of the *border* is aligned on the left-margin of the page, so take care of the `\parindent`.

### 1.4 Predefined colors

The package WriteOnGrid proposes "shortcuts" for classic colors !

```
\definecolor{TyrrianPurple}{rgb}{0.4,0.01,0.24}  
%Colors for Seyes  
\def\ColSeyes{Plum!75/LightSteelBlue!50}  
%Colors for Ruled  
\def\ColRuled{LightSteelBlue!50/TyrrianPurple}
```

Code  $\LaTeX$

# 2 Commands, keys and options

## 2.1 The command

```
%command, with keys to prepare the grid
```

```
\DispGrid[keys]<color>
```

The first argument, *optional*, between [...] give the **(keys)** :

- **(NumSquares)** to specify the size of the grid, under (nbCol)x(nbRow) ; default : **(17x5)**
- **(Unit)** to specify the scale of the grid ; default : **(1)**
- **(Margin)** to specify the global margin at the beginning of the lines ; default : **(0)**
- the boolean **(DispBar)** to display or not the bar ; défaut : **(true)**
- **(Enlarge)** to specify the squares-overtakings, globally with LR or side by side with L/R ; default : **(0)**
- the boolean **(Border)** to display the basis border of the grid ; default : **(false)**
- the key**(Grille)**, from **(5x5/Seyes/Ruled)**, to specify the grid's type. défaut : **(5x5)**

The second argument, *optional*, between <...> is the color(s) of the grid :

- by **(Color)** (**(lightgray!50)** by default) for 5 x 5 ;
- by **(ColorA/ColorB)** (**(lightgray!50/lightgray!25)** by default) for Seyes or Ruled.

```
%18x4 big squares, w/o overtaking, Seyes colors, w/o margin/bar
```

```
\DispGrid[NumSquares=18x4,Grid=Seyes,DispBar=false]<\ColSeyes>
```

```
%36x8 small squares, overtakings 3/3, LightSteelBlue color
```

```
\DispGrid[NumSquares=36x8,Enlarge=3/3]<LightSteelBlue>
```

```
%12x3 lines "Ruled", w/o overtakins, Ruled colors, centered, with 2-margin
```

```
\begin{center}
```

```
\DispGrid[NumSquares=12x3,Grid=Ruled,Margin=2]<\ColRuled>
```

```
\end{center}
```

## 2.2 The environment

%environment, with keys to prepare the grid

Code  $\TeX$

```
\begin{EnvGrid}[keys]<color>
...
\end{EnvGrid}
```

The first argument, *optional*, between [...] give the **(keys)** :

- **(NumSquares)** to specify the size of the grid, under (nbCol)x(nbRow) ; default : **(17x5)**
- **(Unit)** to specify the scale of the grid ; default : **(1)**
- **(Margin)** to specify the global margin at the beginning of the lines ; default : **(0)**
- the boolean **(DispBar)** to display or not the bar ; défaut : **(true)**
- **(Enlarge)** to specify the squares-overtakings, globally with LR or side by side with L/R ; default : **(0)**
- the boolean **(Border)** to display the basis border of the grid ; default : **(false)**
- the key **(Grille)**, from **(5x5/Seyes/Ruled)**, to specify the grid's type. défaut : **(5x5)**

The second argument, *optional*, between <...> is the color(s) of the grid :

- by **(Color)** (**(lightgray!50)** by default) for  $5 \times 5$  ;
- by **(ColorA/ColorB)** (**(lightgray!50/lightgray!25)** by default) for Seyes or Ruled.

```
%18x4 big squares, w/o overtaking, Seyes colors, 3-margin
\begin{EnvGrid}[NumSquares=18x4,Grid=Seyes,Margin=3]<\ColSeyes>
\end{EnvGrid}
```

Code  $\TeX$

```
%36x8 small squares, overtakings 3/3, LightSteelBlue color
\begin{EnvGrid}[NumSquares=36x8,Enlarge=3/3]<LightSteelBlue>
\end{EnvGrid}
```

```
%12x3 lines "Ruled", w/o overtakins, Ruled colors, centered, with 2-margin
\begin{center}
\begin{EnvGrid}[NumSquares=12x3,Grid=Ruled,Margin=2]<\ColRuled>
\end{EnvGrid}
\end{center}
```

## 2.3 Write on the lines

The idea is to write on the created grid (environment !). In order to write *right* on the lines, we can :

- give the lines one by one ;
- avoid using multilines paragraphs, items ;
- pass a line.

```
...
%to write the lines, one by one
\WriteLine[keys]<alignment>{text}
%to pass the ligne
\PassLine
...
```

Code  $\LaTeX$

The first argument, *optional*, between [...] give the **(keys)** :

- **<OffsetH>**, in squares, to shift the text from the **margin** ; default : **<0>**
- **<OffsetV>** to shift vertically the line ; default : **<0pt>**
- **<Scale>** to specify the scale of the given text. default : **<1>**

the second argument, *optional*, between <...> is the horizontal alignment (**<left/center/right>**) of the text in the basis *border*, **<left>** by default.

Le third argument, *mandatory* and between {...} is the text, eventually with options.

```
\begin{EnvGrid}[NumSquares=36x8]
\WriteLine[Scale=1.5]{my text on ligne 1\ldots}
\WriteLine[Scale=1.5]<center>\ttfamily my tetetype text centered on line 2\ldots}
\WriteLine[Scale=1.5]<right>{right-align text on line 3\ldots}
\WriteLine[Scale=1.5,OffsetH=0.1]{\textcolor{red}{red text, 1mm-shifted\ldots}}
\PassLine
\WriteLine[Scale=0.5]{\sffamily sans serif text, reduced by 50\,\%, on line 6\ldots}
\WriteLine[Scale=1.5,OffsetH=3]{\cursive 3 squares-shifted text\ldots}
\end{EnvGrid}
```

Code  $\LaTeX$

my text on ligne 1...

my tetetype text centered on line 2...

right-align text on line 3...

red text, 1mm-shifted...

sans serif text, reduced by 50 %, on line 6...

3 square

```
\begin{EnvGrid}[NumSquares=16x4,Margin=2,Grid=Ruled]<\ColRuled>
\WriteLine[Scale=1.5]{\textcolor{red}{red text on line 1\ldots}}
\WriteLine[Scale=1.15,OffsetH=1]{\$(1+x)^2=1+2x+x^2$ on line 2, with 1-square offset\ldots}
\WriteLine[OffsetH=-1]{\textcolor{blue}{blue text, back to left, on line 3\ldots}}
\end{EnvGrid}
```

Code  $\LaTeX$

red text on line 1...

$(1+x)^2 = 1 + 2x + x^2$  on line 2, with 1-square offset...

blue text, back to left, on line 3...

# Additional informations

## 3 Introduction

There's few other possibilities with the package `WorkOnGrid`, but for the moment only with *french* keys, so there's no specific documentation for these commands.

To sum up, they create full paper grid (by preference for `a4paper`), with the ability to write paragraph.

## 4 Example

Code  $\LaTeX$

```
\begin{PleinePageRuled}[NumLignes]
  \LignePapierRuled[Echelle=1.25,Ligne=1]{C. PIERQUET \hfill \LaTeX}
  \LignePapierRuled[Echelle=1.25,Ligne=2,Couleur=red]<center>{\underline{\cursive\bfseries Evaluation 3}}
  \CadreNoteRuled{3}
  \LignePapierRuled[Echelle=1.25,Ligne=8,Couleur=ForestGreen]{\sffamily\underline{Exercice 1 :}}
  \ParagraphePapierRuled[Ligne=9]{\cursive\lipsum[1]}
  \ParagraphePapierRuled[Ligne=22]
  {%
    We try with math,  $\frac{1}{2}=\frac{3}{2}$ , inline, with several lines.\\
    And another math example,  $\int_0^1 2x \, dx = 1$ .\\
    A new line now !
  }
\end{PleinePageRuled}
```

Evaluation 3Exercise 1 :

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit,  
ve  
mauris. Nam arcu libero, nonummy eget, consectetur id, vul  
Donec vehicula augue eu neque. Pellente  
netus et male  
rhoncus sem. Nulla et lectus ve  
eu tellus sit amet tortor gravida placerat. Integer sapien e  
pretium quis, viverra ac, nunc. Prae  
Aenean faucibus. Morbi dolor nulla, male  
nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh  
mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet  
orci dignissim rutrum.

We try with math,  $1 + \frac{1}{2} = \frac{3}{2}$ , inline, with several lines.

And another math example,  $\int_0^1 2x dx = 1$ .

A new line now !

# History

v0.1.3 : Command to display a grid (w/o writing on it)  
v0.1.2 : Shortcuts for default colors + small bugfixes  
v0.1.1 : Best color choice  
v0.1.0 : Initial version
